

Small Volume Prover Preventative Maintenance Packages

FMD Service Technicians perform a comprehensive 7-point inspection on your prover. Our thorough inspection identifies any potential issues and ensures optimal performance, accuracy, and safety.

Our 7-Point Assessment Includes:

1. Check for Leaks

Check the seal retainers and or leak monitors. Inspect any flanged connections, valves, tubing etc.

2. Check for Loose Hardware

Check seal retainer hardware and check sprocket/pulley movement on drive shaft

3. Check Belt Tensioner

Check that shuttle belt tension is even and no evidence of belt damage or wear

4. Check Shock Absorbers

Check that shocks are not leaking fluid and are still set to desired setting

5. Clean Unit

Remove excessive dirt or debris from inside the of drive end enclosures and clean rails

6. Check alignment

Verify drive end alignment and check sprockets for movement

7. Leak Test

Perform leak detector test for internal piston seals
